

20 Microns Reports FY2024–25 Performance and Strengthens Its Strategic Growth Platform

23 May 2025

20 Microns Limited continued to strengthen its business platform during FY2024–25 through investments in capacity, mineral resources, international operations, research and development and value-added products.

The company has been pursuing a phase-wise investment programme covering expansion of recently acquired Malaysian operations, additional mining resources, calcium carbonate and talc capacity expansion, and a significant increase in kaolin capacity.

The company also continued to strengthen its operational infrastructure, including the development of quality-control and administrative capabilities. These initiatives form part of its broader strategy to expand its industrial minerals and specialty chemicals portfolio while improving customer service and manufacturing capabilities.

The company remains focused on combining mineral resources, processing technology, application development and customer-oriented technical support to create a broader platform for future growth.
