

20 Microns Announces ₹100 Crore Investment Programme for Capacity Expansion and Specialty Minerals

26 May 2025

20 Microns Limited announced a planned capital expenditure programme of approximately ₹100 crore over the following 15–18 months to support capacity expansion, mining development and the growth of higher-value mineral products.

The programme included phased investments in recently acquired Malaysian operations, additional mining opportunities, calcium carbonate and talc capacity expansion, and significant expansion in kaolin. The company also outlined plans to strengthen its ability to serve growing demand for specialised and performance-oriented mineral solutions.

The company's Malaysian mining operations were expected to begin operations around mid-2025. In India, the Makrana expansion was planned around an ultrafine calcium carbonate roller-mill facility, adding approximately 12,000 tonnes of annual capacity.

The investment programme reflects the company's focus on expanding manufacturing capabilities, strengthening mineral resource access and increasing its participation in value-added segments.
