

20 Microns Announces ₹100 Crore, 24-Month Expansion Plan to Accelerate Growth

5 February 2026

20 Microns Limited announced a proposed capital expenditure programme of approximately ₹100 crore over a 24-month period to support capacity expansion, technology upgrades, value-added product development, mining development and sustainability initiatives.

The programme covers existing and planned manufacturing and R&D facilities, high-performance mineral solutions, captive quarrying, automation and energy-efficient manufacturing. The company also plans to support new product development and asset-backed business opportunities.

The investment is planned to be funded through a balanced mix of internal accruals and selective debt. The company has also identified sustainability-related initiatives, including energy optimisation, waste reduction and development of more environmentally considerate products.

The plan forms part of 20 Microns' longer-term strategy to strengthen its manufacturing footprint, expand its mineral-resource base and increase its share of value-added and performance-oriented products.
